

Vision System on Water Shields

Control of hot meal pressure sensitive curb of glue:

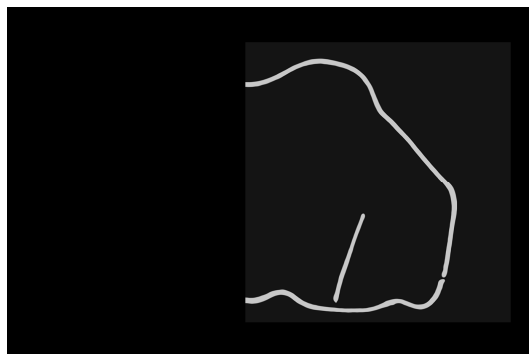

On line **static** control of curb **thickness** along the thermoformed water shield

Check of possible **interruptions** of curb's continuity higher than 2 millimeters

Exact **position** of thermoformed shields

Automatic **identification** of the water shield shape

Easy record of **new shapes**

Our system checks in real time whether the product satisfies or not any specific requirement (orientation, positioning, colors...)

The inspection is static, without using a robot. This allows a significant reduction of implementation/maintenance costs and reduction of overall size.

Our technicians are available also in the post-sale, by direct assistance or remotely.
