

Auteur Garden

*“To plant a garden
is to believe in tomorrow”*

Audrey Hepburn

We like to think that we just highlight the beauty that Nature already created.

Giardini MGF designs, creates and maintains green areas. A company of Vivai MGF Pistoia group, for years we've been a guarantee of quality for private customers, companies and public organizations.

In the following pages you may find a photo collection which shows you what we have done and what we can do for your green areas. The pursuit of beauty, the creation of functional spaces and the respect of nature are the three pillars on which every single one of these gardens is built.

The results are before your eyes. Enjoy the view.

Francesco e Giacomo Mungai

Take a Walk in the Nature

Seeing the colours changing constantly, listening to the wind blowing through the branches, feeling the grass under your feet, smelling the perfume of the flowers blossoming. Walking in a garden must be a multi-sensory experience, an immersion in your own private paradise just outside your house.

The Love for Details

Nature does not act randomly, and neither do we. Every plant, every blossoming, every decoration must be studied and evaluated in every aspect, both aesthetic and practical.

The sum of all these details makes a garden.

Your Most Beautiful Room

For your garden to be beautiful and fill up with colours and perfumes it is not enough for us. To be perfect it must be enjoyable and enjoyed, functional and functioning, a room with trees instead of walls.

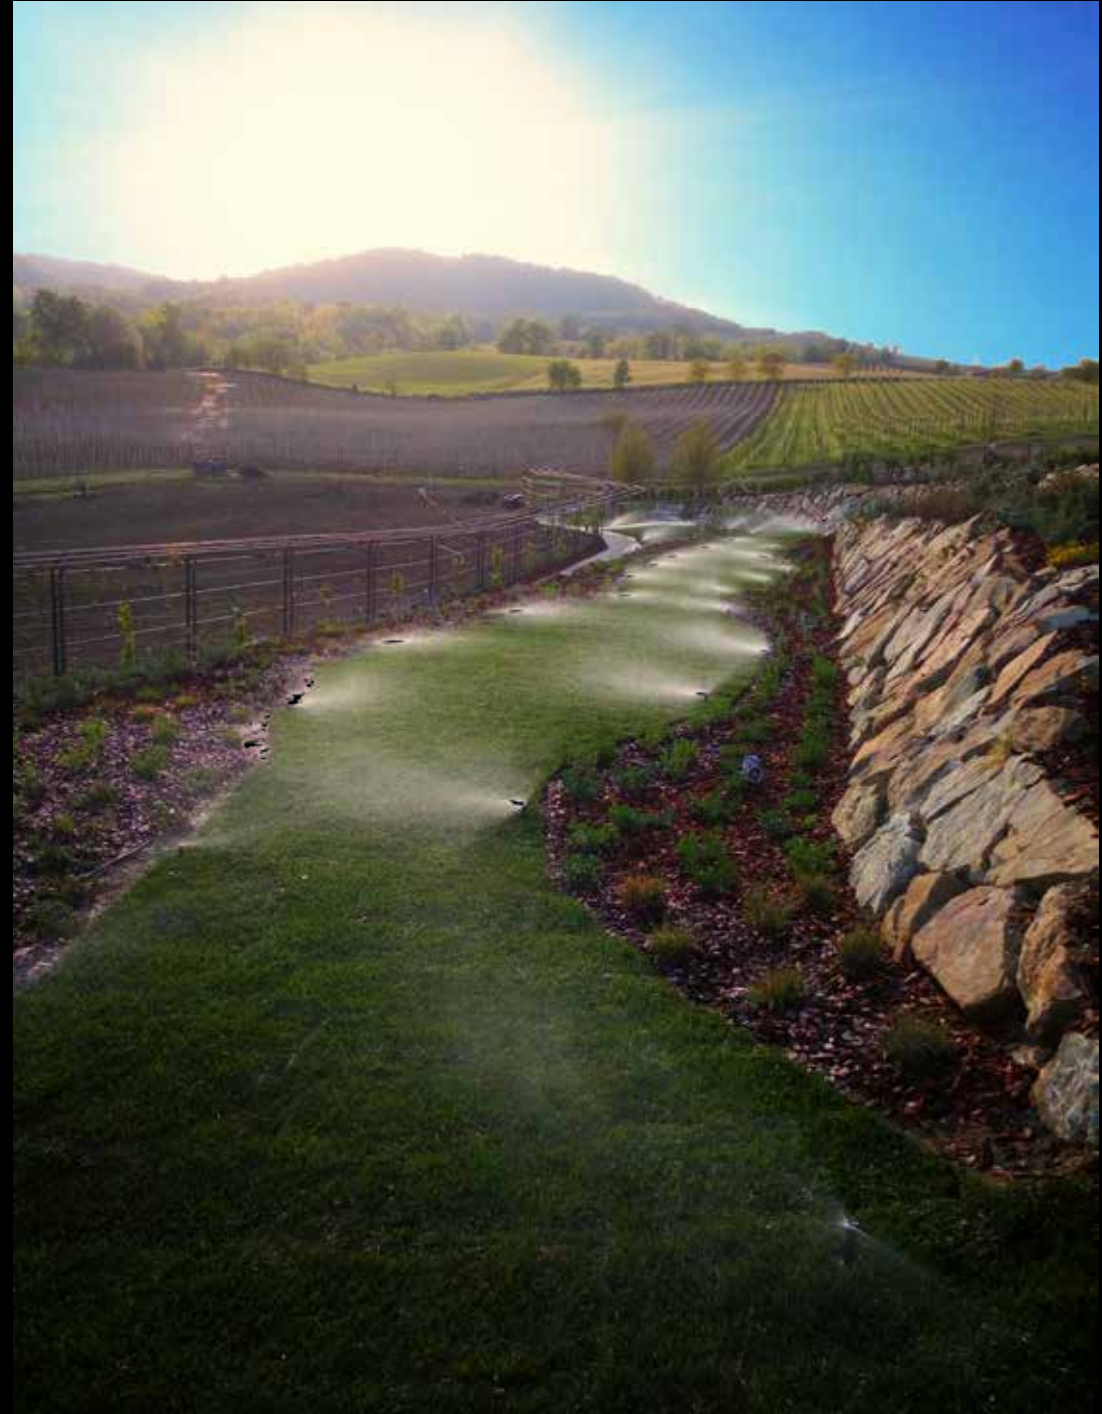

Water, the most Precious Thing

We must not take for granted the importance of water for a garden. Both in the irrigation system, that we personally design and set up, and as a decorative element. Does a more precious thing come up to your mind?

GIARDINI MGF

The Importance of the Land

Growing vegetables is the most effective way to use a piece of land, and who lives in the country knows it well. Today we maintain this wonderful concept, integrating it in the context of a garden, once again merging beauty and functionality.

GIARDINI MGF

The Invasion of Nature

Seems like a true invasion the one that makes green for events and parties otherwise gray places. These wonderful temporary gardens show us how much important it is to be in touch with nature in our everyday life.

YOU ARE NATURE

The Art of Lawn Maintenance

There are many things to be done in order to grow and maintain a nice lawn, from choosing the grass, to cut it and fertilize it. Let us do it, so that you just have to enjoy it.

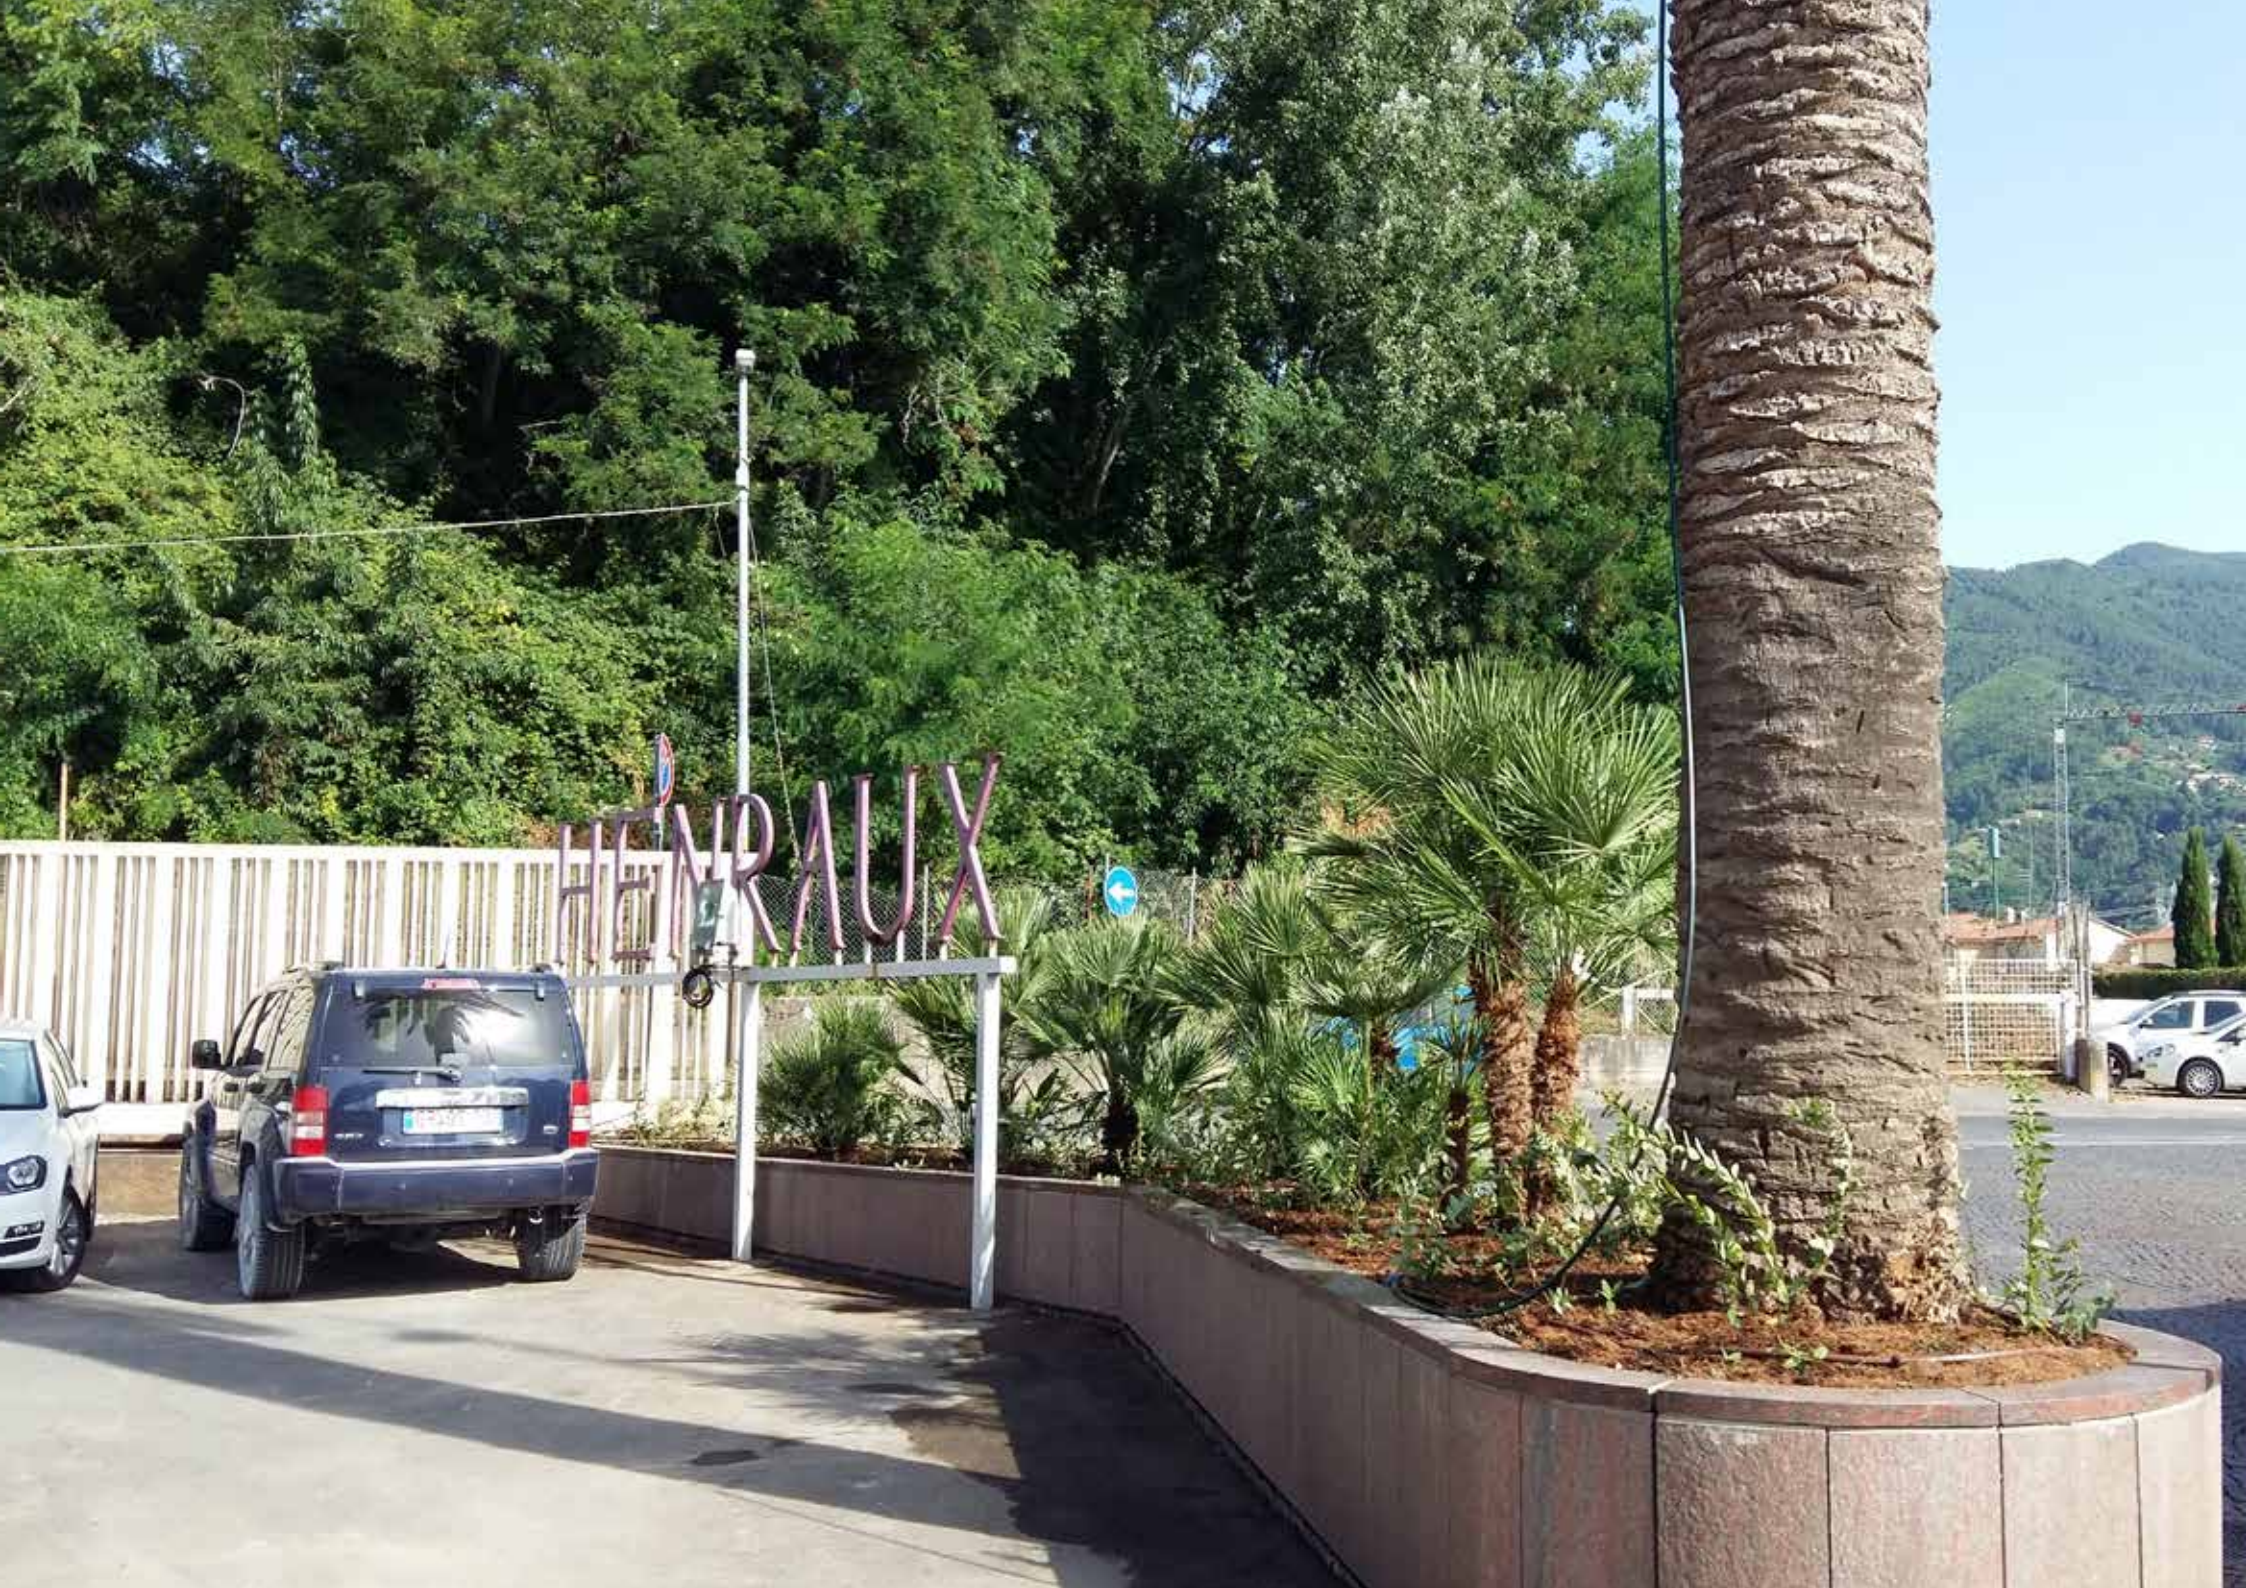

Beauty is Our Job

Our job is to create beauty not only in your private home but also in your work space, growing and maintaining indoor and outdoor green areas of many companies in Italy. Not only we improve the work environment for hundreds of people, but also there isn't a business card more beautiful than this.

Expo 2015

The World Exposition in 2015 in Milan has been a window on the world for many nations. We created and maintained the green areas for eight pavilions.
