

Values and synergies for the excellence concrete mixing

Top quality buildings for innovative projects, as the first thermodynamic solar farm with Csp technology

A company specialised in the designing and building of concrete dosing and mixing plants, working with passion, reliability and synergy. This can be considered the soul and core business of Tecno-Beton, founded

by Livio Betelli. “Professionalism, the quality of both products and services have always been the strengths that allow the company to face important orders in a qualitative context, among which the partnership with Airlight Ener-

gy leading to the creation of ‘Betonmix’, a concrete mixing plant for the production of fibre-reinforced concrete for an innovative project, the first thermo-dynamic solar farm with Csp (Concentrated solar power) technology, or the realization of a lime furnace Cim-TD7 for Ferretti International/Cimprogetti”, underlines the managing director Simona Bianchi.

In order to obtain these results, the focus of Tecno-Beton on the research and development of new products is never lacking. “We can surely affirm that the experience acquired over these last 25 years on concrete mixing plants has created, together with our staff, an added value. We boast the flexibility and company size needed to build concrete mixing plants with a high quality level, following, for the client, the whole designing and managing process.

The client is at centre of our company philosophy, as Betelli says: “basically our objectives do not concern turnovers, which are however heartily welcomed and needed, but our satisfaction as well as the customer’s. It could sound strange, but we think that all this led to the feedback we are obtaining from our customers in these years of crisis, allowing us to develop innovative projects”. One of these innovations is undergoing the last testing at the operation headquarters of Betonrossi Spa. In the short time Tecno-Beton aims at “developing this innovation also in countries outside the European Community”, concludes Simona Bianchi.
